Pollination	Stamens	Carpel (Pistils)
This is when pollen from one flower is moved to another flower.	These are the male parts of the flower. They make pollen. They have 2 parts: an anther and a filament	This is the female part of the flower. It is where the seeds are made. It has 3 parts: the stigma, style and ovary.

*Print on cardstock, and laminate if possible! Cut out around all solid lines to use as labels.*
